

NAMAN SINGLA

Tohana, Haryana | 83073-66988 | namansingla830@gmail.com
[linkedin.com/in/namanweb](https://www.linkedin.com/in/namanweb) | github.com/Naman830

EDUCATION

Indira Gandhi Govt. College, Tohana

Expected Graduation: Jun 2028

Bachelor of Computer Applications (BCA) | CGPA: 7.50 / 10

Core CS: Data Structures & Algorithms, Operating Systems, DBMS, Object-Oriented Programming, Computer Networks, System Design

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Web: React, Next.js, Node.js, Express.js

Databases: PostgreSQL, MongoDB, Redis

Miscellaneous: Docker (Basic), Git, Linux: ubuntu

PROJECTS

ParuAI, AI Website Builder

React, Node.js, PostgreSQL, OpenAI SDK

Live: ai-website-builder-rho-three.vercel.app | Code: github.com/Naman830/ParuAI

- Built a full-stack app that turns natural-language prompts into complete, editable websites through an LLM-powered generation pipeline, with a live preview streamed to the browser in real time
- Designed the PostgreSQL schema (Prisma ORM) and built a credit-based usage system with automatic refunds for failed generations
- Built a visual click-to-edit interface and an in-browser code editor for direct customization, plus an automated SEO/accessibility audit tool with one-click fixes
- Implemented authentication (email/password, Google/GitHub OAuth), covered core logic with 200+ automated tests, and deployed independently across Vercel, Render, and Neon PostgreSQL

CollabCode, Real-Time Collaborative Code Editor

Next.js, TypeScript, Yjs, Docker

Code: github.com/Naman830/CollabrativeCodeEditor

- Built a real-time collaborative code editor where multiple users edit simultaneously, using CRDT-based sync (Yjs) so edits merge automatically without conflicts
- Implemented real-time multiplayer cursors and presence indicators so each collaborator's position is visible live
- Built sandboxed multi-language code execution (JavaScript, Python, TypeScript, Java, C++) in isolated Docker containers with resource limits to prevent abuse
- Enforced rate limiting and input validation against malicious use; verified correctness with 295 automated tests across unit, integration, and end-to-end suites

Real-Time Chat & Video Calling Platform (WebRTC), In Progress

Next.js, Socket.IO, WebRTC

Code: github.com/Naman830/webRTC

- Architecting a two-server real-time system, Next.js for authentication and pages, and a standalone Socket.IO server for live messaging, sharing a common PostgreSQL database
- Implementing peer-to-peer audio/video calling with WebRTC so media never routes through the application server
